Review:	This paper fits well with the sub theme of the conference. The author(s) has gone to the roots of the problems, which is the focus of the present conference. The author(s) have tried to analyze a specific issue which needs to be discussed. The author(s) has highlighted the issue of Child Sexual Abuse in the cyberspace in a different context and brought to the focus of the international audience. This is less discussed in the conferences and this paper fills the void. This paper can be accepted.

Review:	I found this paper interesting. This paper shows some promise. The approach on the issue of Child sexual abuse via internet and associated issues is novel. It will be a good addition to SASCV conference. I suggest that this paper be accepted on condition that the author includes the word "Internet" in the title. <i>Child sexual abuse in the Internet</i> . Also the author should include case studies in the extended abstract.
